

✓ Pre-Hurricane Roof Checklist

- ☐ **Schedule an inspection:** Experienced inspectors will check flashing, seams, decking, insulation and weatherproofing, paying close attention to cracks, chips, buckles, ponding water and missing screws or nails.
- ☐ **Schedule repair work:** Heed all recommendations. Insurance claims may be rejected if it's proven that damage was avoidable by completing recommended repairs or regular maintenance.
- ☐ **Schedule policy review:** Meet with your insurance agent to review insurance policy terms, deductibles and coverage limits. Consider purchasing property, flood and hurricane insurance.
- ☐ **Check drainage systems:** Have a professional clean gutters, downspouts and drains so that fallen leaves, twigs, pinecones and even roofing debris do not impede drainage during heavy rains.
- ☐ **Trim landscaping:** Hire a landscaping pro to trim any branches that extend over or near a structure, as well as remove unhealthy trees and limbs that will likely topple during heavy winds.
- ☐ **Take photographs:** "Before" photos are critical pieces of evidence in the insurance claims process to help document that a storm caused roof damage, not a preexisting issue.
- ☐ **Secure all points of egress:** Remember to secure rooftop hatches and doors like you would any other points of egress in a building.
- ☐ **Preventative maintenance plan:** Hiring a roofer through an annual maintenance plan is a cost-effective method of extending the life of a roof and ensuring potential issues are quickly addressed before they become an emergency.
